

DecodeLabs Week 4 - Data Visualization Dashboard

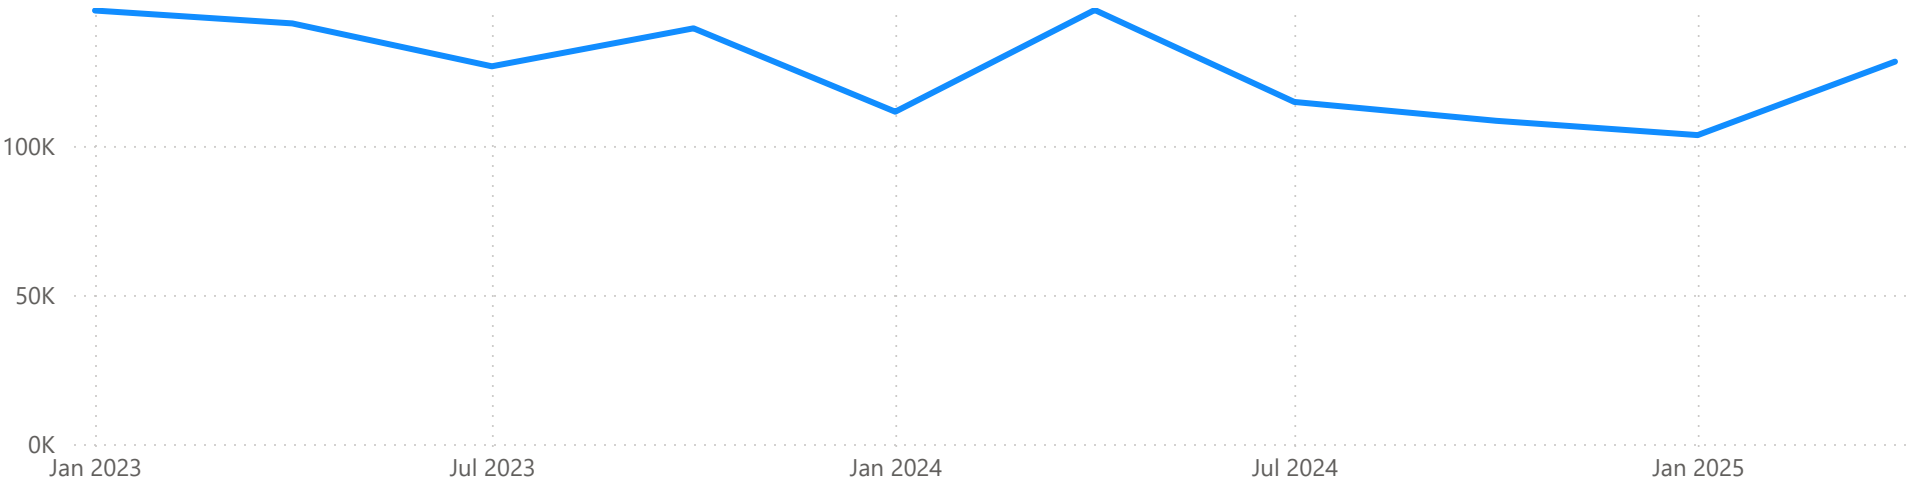

1.26M

Gross Order Value

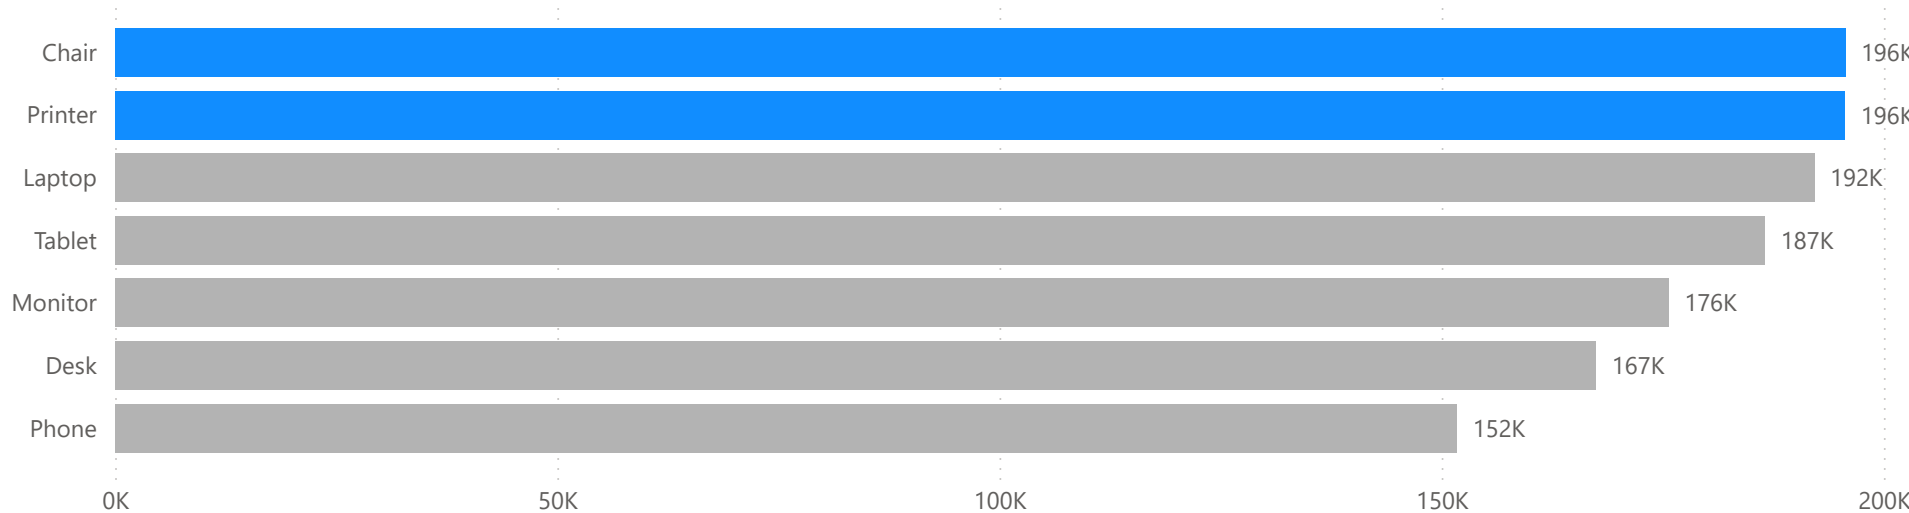

1.2K

Total Orders

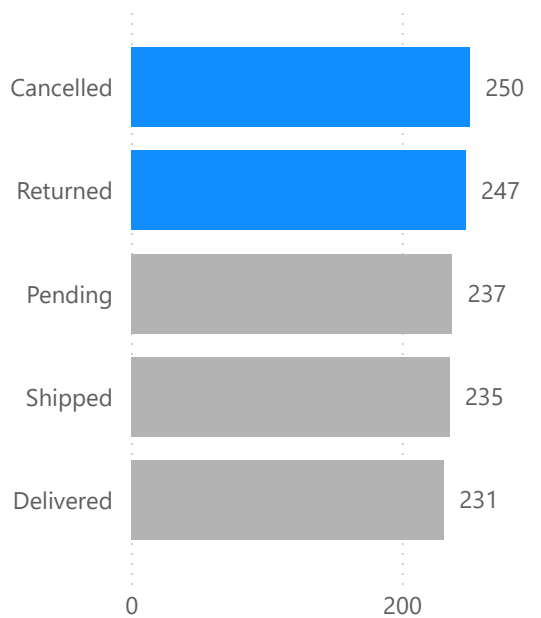

Sales have trended down since early 2023

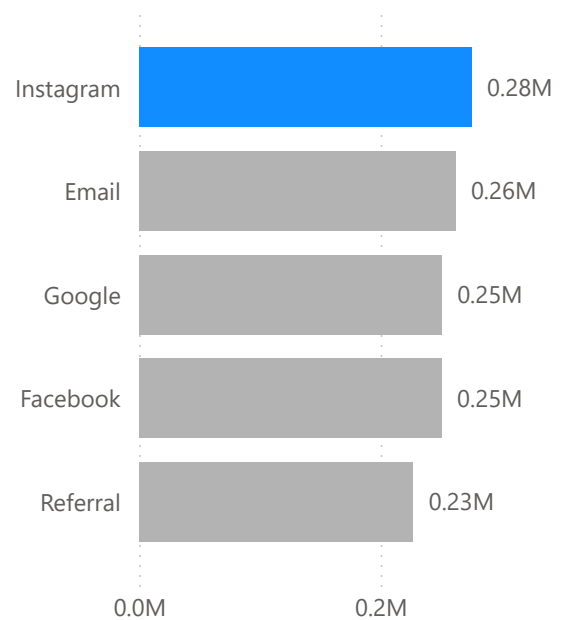

Chairs and printers lead sales; phones trail by ~\$44K

41% of orders cancelled or returned

Instagram brings in the most revenue (\$275K)

Recommendation: Cut order losses before chasing new sales

Situation: \$1.26M in orders over 2.5 years across 1,200 transactions.

Complication: 41% of orders were cancelled or returned, and sales have drifted down since early 2023. The loss rate is nearly identical across every product and channel, so this is a process problem, not a product problem.

Next steps:

1. Add a required "reason code" to every cancellation and return so the root cause can be measured.
2. Audit the checkout and fulfillment process to find where orders are being lost.
3. Set a target of reducing the loss rate from 41% to 30% within two quarters.

Data note: TotalPrice does not reflect coupon discounts (SAVE10, WINTER15), so actual revenue is likely lower than shown.
